Easy printable hexagon elements to create some awesome wall art. Print these in different colors and start stacking them the way you like.

Decorate with plants or add your favorite items. The provided hexagon files are all 150mm wide and 80mm depth, but can be change to fit your needs.

I made .stl's with and without the mounting point in the top. The creation in the pictures hang on 4 screws; you don't have to print them with all hexagons.

I printed these in PLA (with supports) and the construction result is more than sturdy enough to hold the weight of some plants and/or items. Model filament approx 16m/47gr and total filament incl supports is 22m/65gr or each hexagon. Attachment to each other is done with a little dot gel-superglue in the corners of the frames.

I'm curious about you prints and ideas. Please post some pictures of your creation and sent me a comment, as this is my first posted model over here! If you have any questions, don't hesitate to ask.

Kudos to my daughter for her idea and creation (with a little help from me; that's were dad's are for right?) Models created in TinkerCad.

Kind regards, Rene
