Geared fun fidget spinner

I have prepared another **gear spinner** for you, because I love these lovely moving wheels so much! You can see it in my creations, I simply have to model a spinner sometimes.

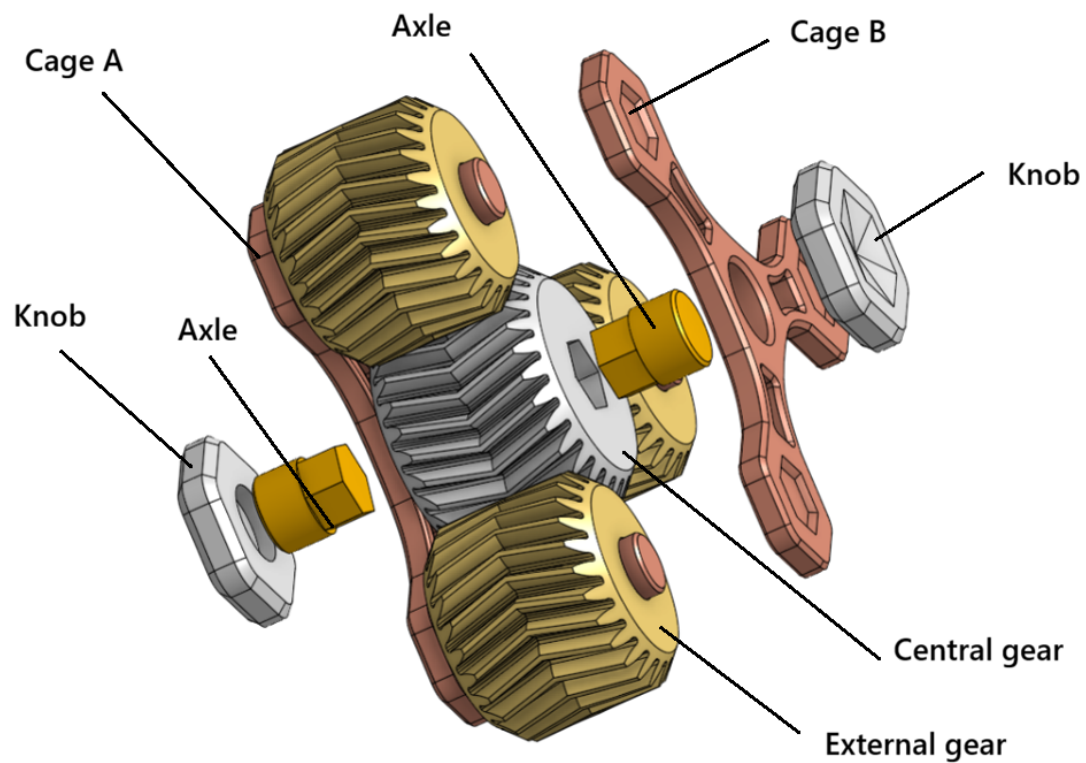

You have already downloaded tens of thousands of these fun toys and I hope you are having a lot of fun with them!

In this one, I tried to create an **interesting geometry using hexagons**. The wheels seem more robust and because they are heavier, they rotate better and longer.

When I put this spinner together, I was surprised how easy it is to spin and at the same time it has good inertia.

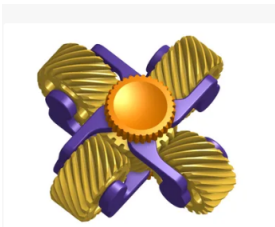

Assembly instructions

I have a few more tips for the good functioning of the spinner:

Clean all the seams on the cage axes with a knife or scalpel and **drill holes** in the outer gears with a drill of the appropriate size - there are also seams there and they can cause an obstacle during movement. If you have stringing on the gears, clean them with a brush, this will help the movement to be smoother

**You can find many other fun
spinners and fidgets in this
collection:**
