Summary

Modular stackable container (organizer) for small items

[Household](#) > [Other House Equipment](#)

Bring perfect order to your desk or workshop with these ergonomic stackable containers. Designed specifically for convenient storage of small parts, screws, nuts, electronic components, and office supplies, these bins are designed with a wide front cutout, ensuring you always have a clear view of the contents and easy access to items even from the bottom tier.

Their key feature is the built-in stop grooves on the top edges. They securely lock the bins together, preventing them from sliding or tipping over when stacked. The design is fully optimized for FDM 3D printing: it requires no support, saves plastic, and prints extremely quickly. An excellent and stylish solution for those who value functionality and minimalism.
